The protein may be used in a vaccine typervent or treat H. pylori infection or to identify H. pylori polypeptide binding compounds, useful as potential H. pylori life cycle activators or inhibitors.
The genomic sequence of H. pylori (ATCC 55679) was determined from overlapping contigs generated by mechanically shearing the bacterial DNA. The sequences were analysed for ORF of at least 180 nucleotides, and the predicted coding regions defined by computer evaluation. To identify likely H. pylori antigens for vaccine development, the amino acid sequences predicted from various ORF were analysed for significant homology to other known or exported membrane proteins. Having identified and determined the sequences of interest, particular regions can be isolated from H. pylori by PCR amplification for recombinant polypeptide production, e.g. in E. coli hosts.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 01-APR-1996;

                                                                                                                                                                                                                                                                                     antibody-detection assays, on sera, plasma, urine, saliva etc., they are highly sensitive and specific. The specification also describes 69 previously unrecognised immunogenic cluster families. H. pylori antigens are used to detect H. pylori-specific antibodies, for diagnosing infection or to confirm eradication of infection, and in vaccines to protect against H. pylori infection and related diseases (gastritis, peptic ulcer, gastric adenocarcinoma/lymphoma).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AAV90653 standard; DNA; 770 BP

                                                                                                                                                                                                                                                                                                                                                                                            The present sequence encodes a Helicobacter pylori antigenic protein that is characterised by immunoreactivity with H. pylori-positive antisera. The proteins are highly immunogenic and induce a long-lasting immune response that persists even after antimicriobial treatment. In

  antibody-detection assays, on sera, plasma, urine, saliva etc., highly sensitive and specific. The specification also describes previously unrecognised immunogenic cluster families. H. pylori
                                                                         The present sequence encodes a Helicobacter pylori antigenic protein that is characterised by immunoreactivity with H. pylori-positive antisera. The proteins are highly immunogenic and induce a long-lasting immune response that persists even after antimicriobial treatment. In

CC Sequences ABB90526-ABB90715 represent novel proteins from Chlamydia CC pneumoniae (strain CWL029), and ABL91184-ABL91373 represent DNA encoding Ct them. The proteins are predicted to be immunogenic and may therefore be conserved in vaccine production and for diagnostic purposes. Chlamydia CC pneumoniae is a common cause of respiratory disease in humans, and is calso involved in the development of cardiovascular diseases such as common cause of respiratory disease in humans, and is catheroscilerosis, coronary artery disease, carotid artery stenosis, composation and stroke. The proteins and nucleic acids of the invention composation and stroke. The proteins and nucleic acids of the invention composation or treatment of chlamydial infections, particularly Chlamydia pneumoniae infections. The proteins may also be used in the detection of CP chlamydia pneumoniae, and the nucleic acids may be used in pCR, branched CC pneumoniae gene expression. The present sequence represents a compositionally claimed DNA which encodes a Chlamydia pneumoniae protein of the present sequence represents a compositionally claimed DNA which encodes a Chlamydia pneumoniae protein of the present sequence represents a compositionally claimed DNA which encodes a Chlamydia pneumoniae protein of the present sequence represents a compositional protein of the present sequence represents a composition of the presents and presents a composition of the presents and presents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel Chlamydia pneumoniae protein useful in the manufacture medicament for treatment or prevention of infection due to CP preferably Chlamydia pneumoniae, and for diagnostic purposes

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               or express it in a non-toxic, mutated form. The omp P6 probes are useful in diagnostic tests as capture or detection probes and the primers are useful in diagnostic methods involving PCR (polymerase chain reaction).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           of omp P6 precursor protein and their corresponding DNAs are useful in vaccine composition. The polynucleotide is useful in the construction of attenuated Chlamydia strains that can over express the polynucleotide of attenuated the polynucleotide of attenuated the polynucleotide of attenuated the polynucleotide of attenuated the polynucleotide of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               diseases (e.g. bronchitis, sinusitis) and acute respiratory diseases (e.g. cough, sore throat). C. pneumoniae infection is also observed to be associated with atherosclerosis and asthma. Immunogenic fragments
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        protein (omp) P6 precursor gene. The omp P6 precursor polynucleotide, polypeptide and its antibody are useful for detecting, preventing and treating Chlamydia infections e.g. pneumonia, upper respiratory tractifications.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence is Chlamydia pneumoniae outer membrane
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 2;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Chlamydia polypeptides and polynucleotides for preventing, diagnosing and treating Chlamydia infection in mammals, especially humans
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           WPI;

                                                                                                                                                                                                                              The present sequence represents the complete genome of Chlamydia pneumoniae, and encodes proteins AAY34584-Y35879. C. pneumoniae causes respiratory disease such as pneumonia and bronchitis and is thought to be a contributing factor in heart disease, sarcoidosis, sinusitis, purulent otitis media, crythema nodosum or pharyngitis. The polypeptides encoded by the open reading frames of the C. pneumoniae genome (see AAY34584-Y35879) can be used in immunogenic compositions as vaccines.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        δã
                                                                  The present sequence represents the complete genome of Chlamydia trachomatis. Open reading frames (ORFs) of the genome encode polypeptides AAY36754-Y37949. The polypeptides can be used as vaccines against Chlamydia trachomatis. Antisense and ribozyme sequences can also be used to control growth of the microorganism. Chlamydia trachomatis is responsible for a large number of diseases, e.g. eye diseases such as conventional trachoma, nonendemic trachoma, paratrachoma, and inclusion
                                                                                                                                                                                                                                                                                                                                                                                   04-NOV-1998;

The DNA was obtained from M. catarrhalis plasmid DNA by PCR amplification (see also AAF30044-45). The invention provides BASB113 polypeptides, and polynucleotides encoding them, as well as expression vectors, host cells and methods for producing BASB113 expression vectors, host cells and methods for producing BASB113 polypeptides using recombinant methods. Also claimed is a vaccine composition comprising a BASB113 polypeptide, an immunogenic fragment of a BASB113 polypeptide, or a polypeptide having at least 85% amino acid sequence identity to BASB13, or comprising a method of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                polypeptide or antibody. A claimed therapeutic composition useful in treating humans with M. catarrhalis infection comprises at least 1 antibody directed against a BASB113 polypeptide. BASB13 polynucleotides also have utility in diagnosis of the stage and type of infection, and also for therapeutic or prophylactic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            polynucleotide encoding such a polypeptide. A claimed method of diagnosing a Moraxella infection involves identifying a BASB113 polypeptide or antibody. A claimed therapeutic composition useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim 10; Page 67; 86pp; English.

The library has a number of uses described in the specification e.g. is useful for aldentifying diagnostic and therapeutic compositions. M. catarrhalis (Branhamella catarrhalis) is a large

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             δÃ
This sequence represents the complete genome sequence of the bacterium Haemophilus influenzae strain Rd. The invention relates to a computer readable medium (CRM) having recorded upon it the complete H.influenzae nucleotide sequence (I), a representative fragment of (I) or a nucleotide sequence at least 99% identical to (I). By providing the full-length genomic sequence in a computer readable form, it is possible to identify
                                                                                                                    Claim 1; Page 77.2-77.1091; 1291pp; English
                                                                                                                                                                  Haemophilus influenzae Rd genome recorded on computer readable medium - useful for identifying commercially important nucleic acid
                                                                                                                                                         fragments by homology searching

The EMFs can be used to regulate the expression of a nucleic acid molecule. Vectors and altered organisms comprising the predicted ORFS can be used to produce any of the polypeptide fragments of the H. influenzae Rd genome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 1830121 BP; 567399 A;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     transformants. The oprF-oprI hybrid protein, and antibodies raised against it, conferred protection against P. aeruginosa infection in laboratory animals. The hybrid protein was significantly more immunogenic than an oprI-oprF fusion (AAR99627).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           plasmid pRW3 contains the whole P.aeruginosa outer membrane protein OprF gene with a mutated promoter in pTZ19R. It was isolated for the creation of OprF epitope insertion vectors which include a promoter and a DNA sequence encoding at least the amino terminal portion of a P.aeruginosa OprF. Inserted in the DNA sequence are one or more unique restriction sites for insertion of one or more
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     29-MAY-1992;

                                                                                                                                                                                                       A cDNA sequence (AAT32599) codes for amino acids 190-350 (AAR99625) of the Pseudomonas aeruginosa ATCC 33354 outer membrane protein F (OprF), i.e. the C-terminal region of protein. It was obtd. by PCR amplification of the OprF gene in plasmid pFSauI (see also AAT32592-93). A hybrid gene between glutathione-s-transferase and the OprF sequence was expressed in Escherichia coli. OprF-OprI (AAT32500) and OprI-OprF (AAT32600) hybrid genes were constructed and the encoded proteins (AAR99626-27) were tested for their efficacy as vaccines against P. aeruginosa infection.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Alignment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The protein is isolated from the OMP of P. aeruginosa serotype 6 ATTCC 33354) and purified by HPLC. The amino-terminal and trypsin fragments are sequenced and a series of oligonucleotide probes constructed corresponding to the established sequences. These probes used to screen a gene bank of 15-20 kb fragments of genomic DNA in lambda EMBL 3. One positive clone includes a 15 kb insert conty. the protein gene, which can be isolated as a 2.5 kb PstI fragment. This
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                fragment cannot be cloned int a high copy no. vector because of the toxicity of the gene prod.., so is subcloned as two fragments with an overlapping region of about 500bp. Ab's are raised by usual immunisation or cell-fusion procedures. The DNA is useful in diagnosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Disclosure; ; p; German.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            DNA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        멍
                                                                                                                                                                                                                                                                                             membrane protein, ompa2, from Actinobacillus pleuropneumoniae (APP) strain Pz420 (ATCC 98930). The invention relates to the novel APP outer membrane proteins omp20, OmpA, OmpA7, OmpA1 and OmpA2 (AAY97896-Y97900) and to nucleic acids encoding them (AAA38554-A38558). APP is a Gram negative coccobacillus which is one of the most important swine pneumonic pathogens. 12 different serotypes of APP have been recognised which vary in geographic distribution. Prior art attempts at vaccinating against APP have produced mainly serotype-specific immune responses. In contrast, natural immunity to any one serotype seems to confer significant protection from disease caused by other serotypes, suggesting that natural exposure induces cross-reactive immunity to shared antigens.
                                                                                                                                                                                         The novel outer membrane proteins of the invention are present in all 12 serotypes, and may provide a target for cross protective immunisation. The novel outer membrane proteins and nucleic acids encoding them can be used as a vaccine against APP in swine. They can also be used as reagents for the diagnosis of APP infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CDS

The present invention relates to virulence genes from Pasteurellaceae. The present sequence is one such virulence gene. The present sequence may be mutated in order to produce an inactive gene.

typable clinical isolates of Haemophilus influenzae share common
epitopes. Thus frimbrin isolated from non-typable Haemophilus
influenzae 1128 strain is a particularly suitable immunogen to
protect against the different non-typable HJ. influenzae that cause
otitis media. Fimbrin protein is produced by culturing a transformed
mlcroblal host , pref. E.coli, Sporodoptera frugiperda or a mucosal
pathogen. Fimbrin protein (FP) produced by this process is claimed.
The FP protein migrates in polyacrylamide genes to a posn. equiv. to
a mol. wt. of 25.5 kD or 37.5 kD.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Vaccine comprising non-typable Haemophilus influenza fimbrin protein - useful in studying, preventing or reducing the severity of otitis media, also fimbrin protein and DNA.

                                                 The present invention provides the protein and coding sequences of proteins from Moraxella catarrhalis. These can be used to produce vaccines which protect against M. catarrhalis infection, which can otitis media, respiratory infection, sinusitus, and pneumonia. The

The library has a number of uses described in the specification e.g. is useful for aidentifying diagnostic and therapeutic compositions. M. catarrhalis (Branhamella catarrhalis) is a large aerobic, gram-negative diplococcus, normally found among the bacterial flora of human upper airways. M. catarrhalis is known to cause acute, localised infections such as otitis media, sinusitis and bronchopulmonary infection and life-threatening, systemic diseases including endocarditis

                                                                                                                                                                                                                       The present sequence is that of the coding region of the hagA gene CC of Haemophilus paragallinarum strain 2403 (serovar A). The gene CC was isolated from chromosomal DNA by PCR amplification. It encodes haemagglutinin (see AAM50718). The invention provides ce encodeing nucleic acids (see AAM50718). The invention provides composition nucleic acids (see AAM51417-27) from 11 strains (serovars A, B and C) of H. paragallinarum, the causative agent of infectious coryza of chickens. The polypeptides are useful in vaccines for communisation against infectious coryza, as are the nucleic acids when expressed in attenuated bacteria, especially Salmonella or CC whom expressed in attenuated bacteria, especially Salmonella or CC the mature protein, or a biologically active fragment, variant or CC derivative, that is capable of eliciting an immune response, providing protection against one or more strains of H. CC paragallinarum in chickens. Also claimed are methods of using the haemagglutninin polypeptides and nucleic acids for detection and

  The present sequence is that of the coding region of the hagA gene of Haemophilus paragallinarum strain 0222 (serovar B). The gene was isolated from chromosomal DNA by PCR amplification. It encodes haemagglutinin (see AAM50721). The invention provides recombinant haemagglutinin polypeptides (see AAM50716-27) and encoding nucleic acids (see ABA91417-27) from 11 strains (serovars A, B and C) of H. paragallinarum, the causative agent of infectious coryza of chickens. The polypeptides are useful in vaccines for when expressed in attenuated bacteria, especially Salmonella or Mycoplasma (claimed). The recombinant polypeptide is preferably the mature protein, or a biologically active fragment, variant or derivative, that is capable of eliciting an immune response,

The gene was isolated from chromosomal DNA by PCR amplification. It encodes shaemaggluthnin (see AAMS0722). The invention provides recombinant haemaggluthnin polypeptides (see AAMS0716-27) and created the paragallinarum, the causative agent of infectious coryza of chickens. The polypeptides are useful in vaccines for immunisation against infectious coryza, as are the nucleic acids cwhen expressed in attenuated bacteria, especially salmonella or Mycoplasma (claimed). The recombinant polypeptide is preferably the mature protein, or a biologically active fragment, variant or cervative, that is capable of eliciting an immune response, coryza paragallinarum in chickens. Also claimed are methods of using the capablastic acids for detection and capablastic acids and nucleic acids for detection and capablastic acids and nucleic acids for detection and capablastic acids for de

The present sequence is that of the coding region of the hagA gene of Haemophilus paragallinarum strain H-18 (serovar C). The gene was isolated from chromosomal DNA by PCR amplification. It encodes haemagglutinin (see AAM50724). The invention provides recombinant haemagglutinin polypeptides (see AAM50716-27) and encoding nucleic acids (see ABA91417-27) from 11 strains (serovars A, B and C) of H. paragallinarum, the causative agent of infectious coryza of chickens. The polypeptides are useful in vaccines for immunisation against infectious coryza, as are the nucleic acids when expressed in attenuated bacteria, especially Salmonella or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Haemophilus paragallinarum strain H-18 haemagglutinin hagA gene

The recombinant polypeptide is preferably the mature protein, or a biologically active fragment, variant or derivative, that is capable of eliciting an immune response, providing protection against one or more strains of H. paragallinarum in chickens. Also claimed are methods of using the haemagglutinin polypeptides and nucleic acids for detection and diagnosis of infectious coryza in chickens.

Shetty,J., Malek,J., Koo,H., Collins,F., Gardner,M. and Loftus,B.J. Direct Submission of BAC-end sequences from Anopheles gambiae
to minimize the inclusion of DNA from microorganisms that inhabit the gut. The DNA is derived from mixed sexes of larvae. The BAC library was constructed at Texas A&M University BAC Center University, College Station, Texas 77843-2123, USA using a HindIII
                                                                               This clone is from an A gambiae BAC library (ND-TAM) provided by Fih. Collins and sequenced by The Institute for Genomic Research (TICR). The BAC library was generated from A. gambiae PEST strain DNA. All DNA was extracted from newly hatched first instar larvae
